

DecodeLabs Data Analytics Internship

Project 2: Exploratory Data Analysis (EDA)

Objective

Analyze the cleaned e-commerce dataset to identify patterns, trends, distributions and business insights.

Tools Used

Microsoft Excel

Basic Statistics Performed

- Count of Orders
- Average Quantity
- Average Unit Price
- Maximum Total Price
- Minimum Total Price
- Revenue Summary

Trends Identified

- Product-wise sales trend
- Payment method distribution
- Order status distribution
- Daily order trend

Outlier Analysis

High-value orders and unusually large quantities were identified for further investigation.

Key Observations

- Order values vary across products.
- Most orders are of moderate value.
- Multiple payment methods are used.
- Dataset is suitable for dashboards and reporting.

Final Outcome

The exploratory data analysis successfully summarized the dataset using descriptive statistics, identified trends and outliers, and generated actionable business insights. The dataset is ready for dashboard creation and advanced analytics.
